

CERTIFICATE

of sustainable &
recyclable raw materials

The Company

Junkers & Müllers GmbH

has joined the BRAMIN-Concept.

Execution

The company was equipped with 1 BRAMIDAN raw material baling press.
The internal and external disposal logistics have been optimized.

Results

Junkers & Müllers GmbH has achieved the following results during the observation period according to defined corporate guidelines.

- 97% less CO₂-emissions through the baling press, previously 90 transports per year.
With the use of the press only 2 transports per year.
- 97% less heavy truck transports (corresponding to CO₂-reduction).
- 10% less heating costs and significantly less drafts in the halls.
- 30% cost reduction by less waste containers.
- less working time, increasing efficiency and order improvement through clear internal structures.

Summary

The application of the BRAMIN-Concept helps protect the environment. The installed raw material baling press saves truck transports due to a lower volume of recyclable material. Source sorting increases the proportion of recyclable material.

BRAMIN congratulates on this contribution to environmental protection.
